sent

Origin:

Takahashi

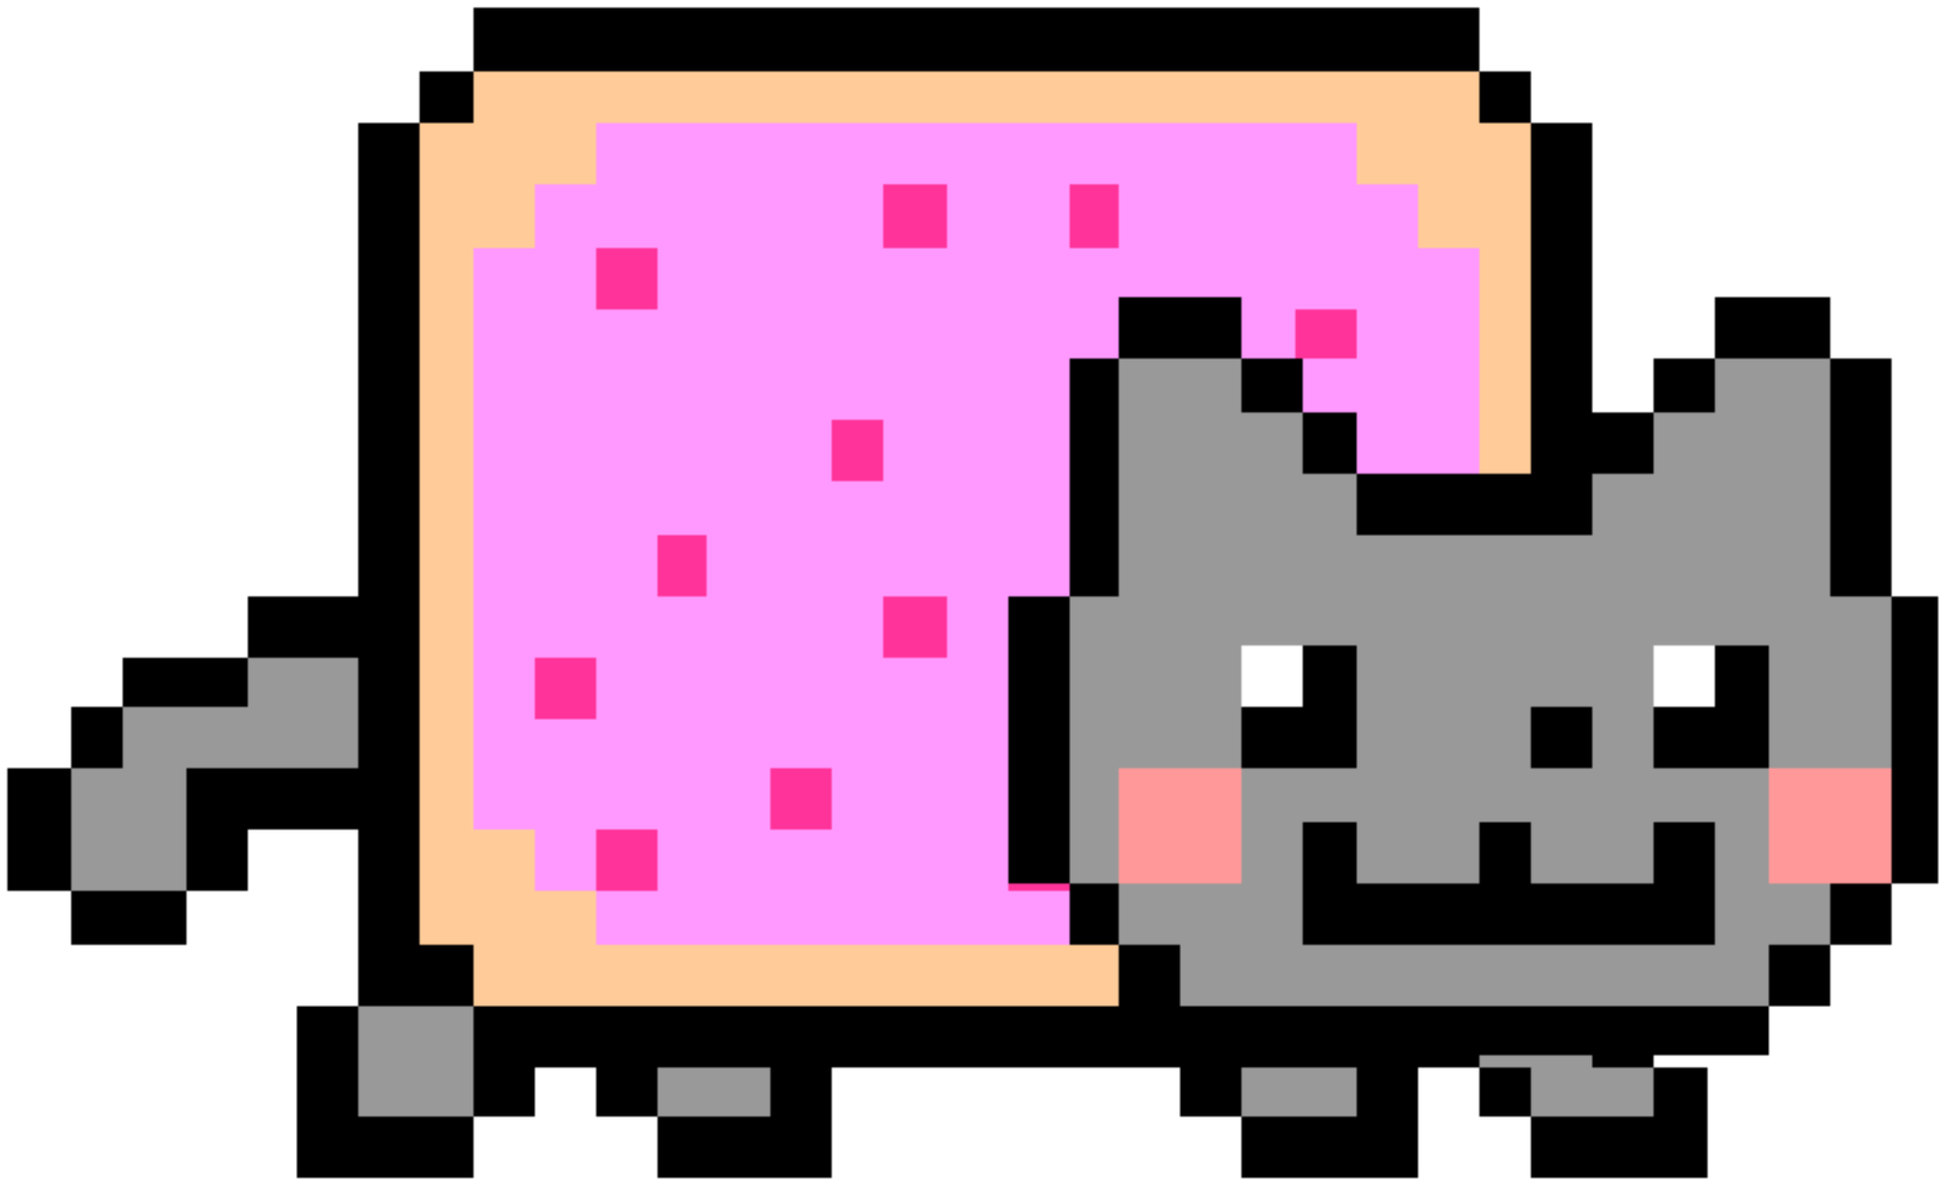
# Why?

- PPTX sucks
- LATEX sucks
- PDF sucks

also:

terminal presentations

don't support images...



easy to use

depends on

Xlib

Xft

farbfeld

~1000 lines of code

usage:

$ sent FILE1 [FILE2 ...]

- one slide per paragraph
- lines starting with # are ignored
- image slide: paragraph containing @FILENAME
- empty slide: just use a \ as a paragraph

@this_line_actually_started_with_a_\.png

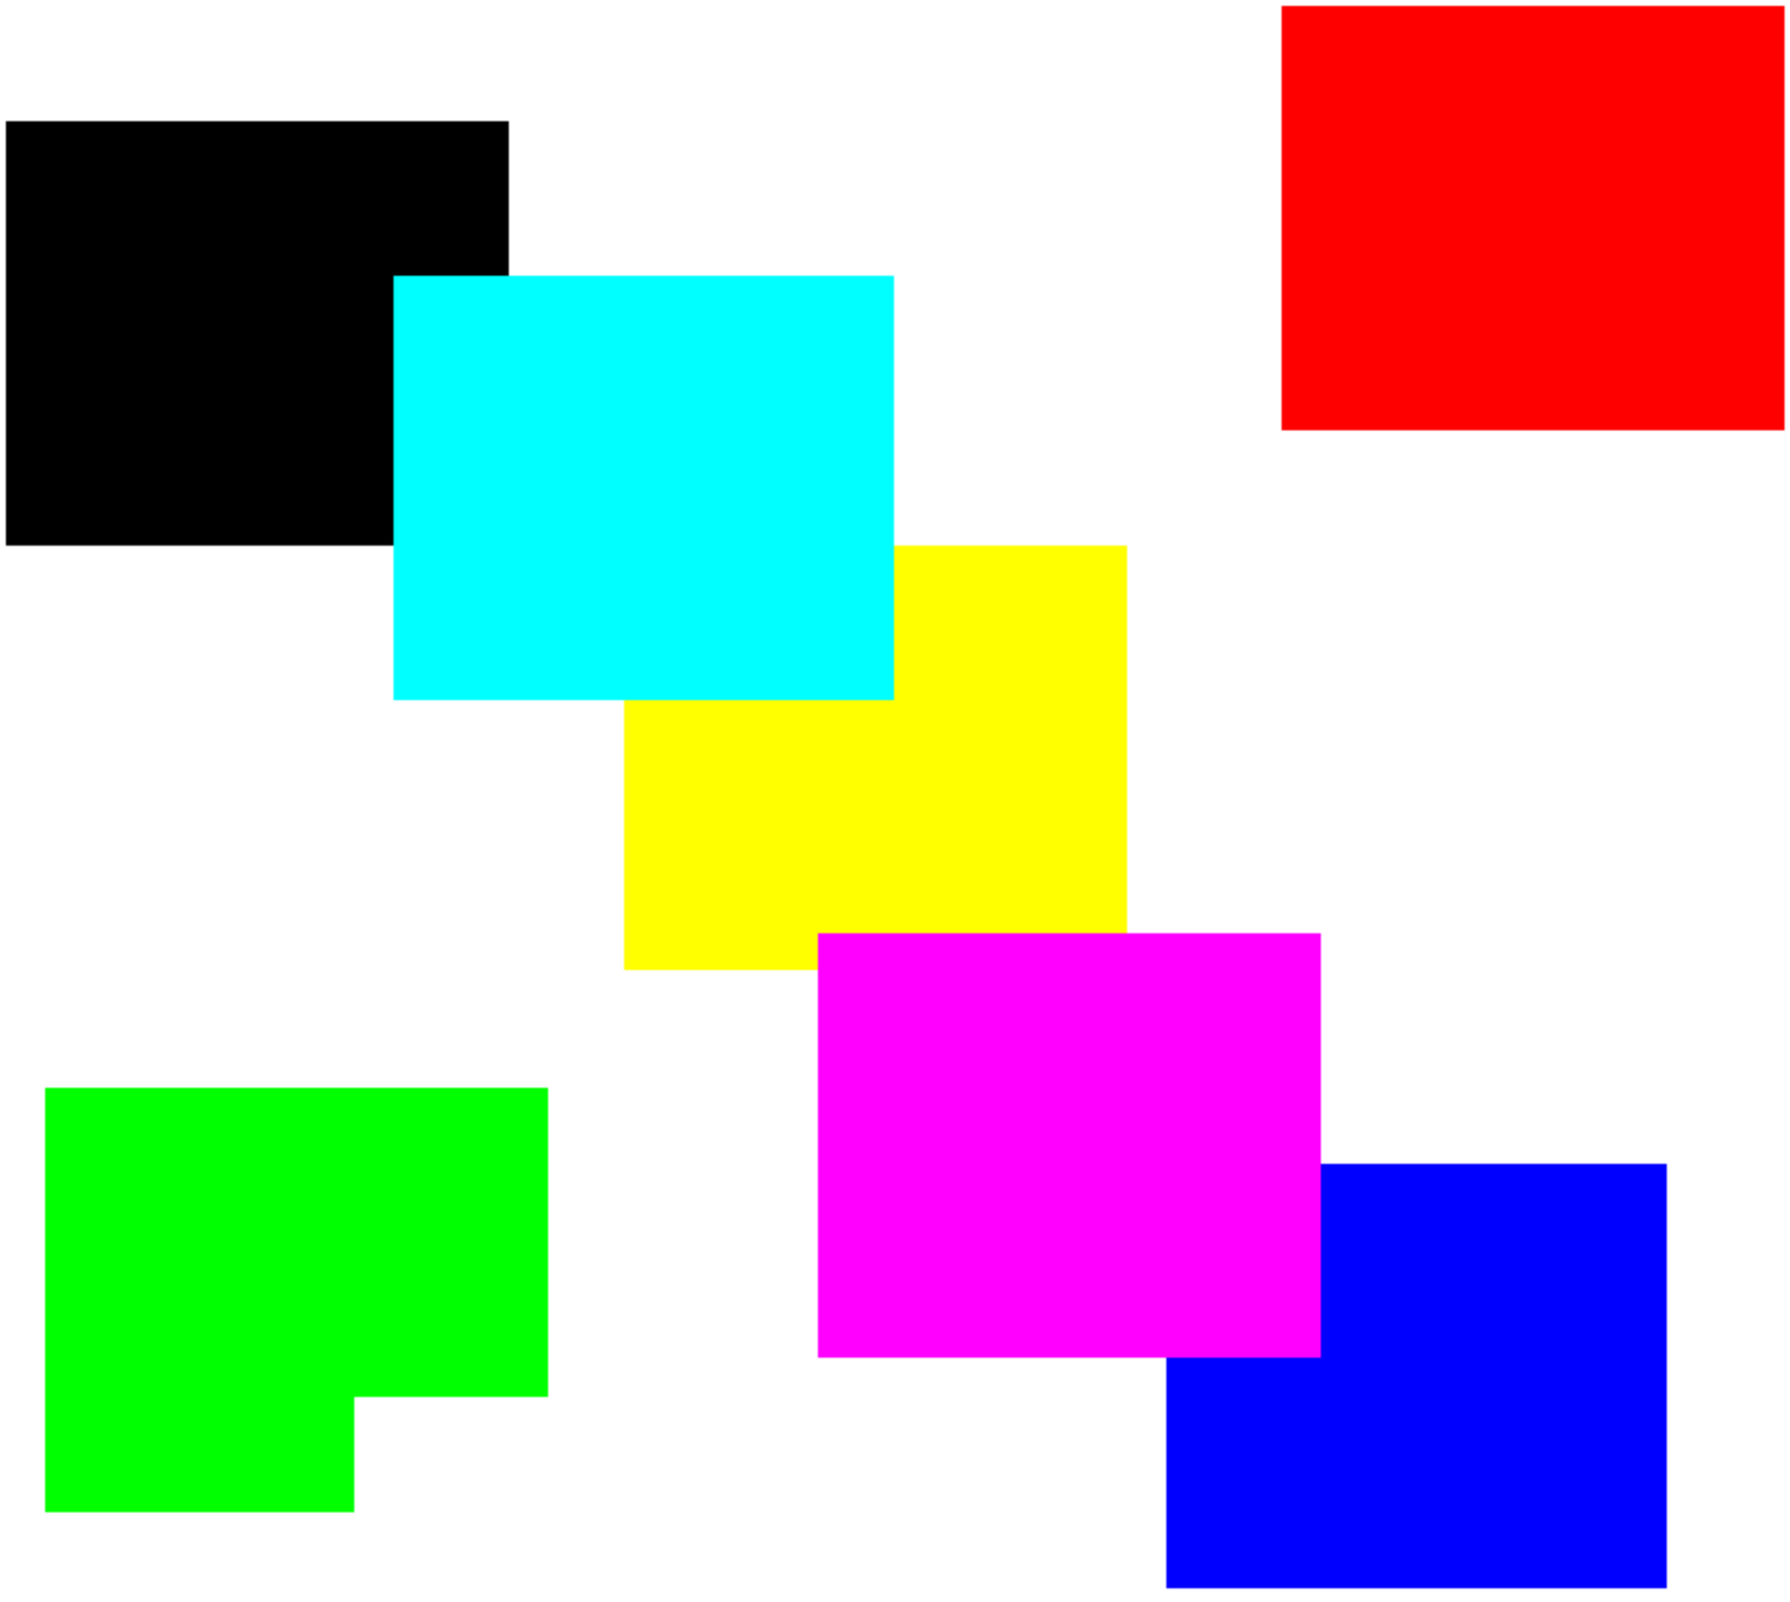
#This line as well

⇒ Prepend a backslash to kill behaviour of special characters

Images are handled in the http://tools.suckless.org/farbfeld/ format internally.

sent also supports transparent images.

Try changing the background in config.h and rebuild.



thanks.
